## **1. Задание**

Задача о гостинице - 3 (дамы и джентльмены). В гостинице 10 номеров рассчитаны на одного человека и 15 номеров рассчитаны на двух человек. В гостиницу приходят клиенты дамы и клиенты джентльмены, и конечно они могут провести ночь в номере только с представителем своего пола. Если для клиента не находится подходящего номера, он уходит искать ночлег в другое место. Создать многопоточное приложение, моделирующее работу гостиницы.

## 2. Решение задачи

### 2.1 Формулировка задания

Заселяем новоприбывших гостей, пока гостиница не будет заполнена (то есть пока есть свободные номера). Заселить гостя мы можем в номер только с представителем своего пола. Отсюда логично будет сначала заполнять двухместные номера, а после того, как в двухместных закончатся места, перейти к заполнению одноместных. На каждого гостя выделяется отдельный работник (поток) отеля.

### 2.2 Решение задачи

Запустить фабрику потоков, собрать потоки во избежание утечки памяти. На каждой итерации (приход гостя) вызываем отдельный поток. К решению данной задачи применяем модель взаимодействующих равных.

### 2.3 Формат ввода данных

В самом начале пользователь видит эскиз пустого отеля (рис. 1). Здесь 'x' – это пустой одноместный номер, а 'x\_x' – пустой двухместный номер. Также, эскиз отеля имеет некоторые декоративные элементы: название – 'Four Seasons', кафе на последнем этаже отеля – 'Cafe' и ресепшн на первом этаже при входе в отель – 'Rec'. Эти элементы никак не влияют на работу программы.

Four Seasons				
x		x		x   x   Cafe
x		x		x   x   x   x
x_x		x_x		x_x   x_x
x_x		x_x		x_x   x_x
x_x		x_x		x_x   x_x
x_x		x_x		Rec

рис. 1

После этого пользователю предлагается выбор (рис. 2) того, как будут приходить гости в отель:

- 1) Рандомно, с помощью самой программы, пока все места в отеле не будут заняты;
- 2) Пользователь будет сам вводить каждого следующего приходящего гостя в отель, пока все места в нём не будут заняты.

```
Choose the way of generating guests:
1) Generate randomly;
2) Input each guest with the help of console.
Input your choice here: _
```

рис. 2

В первом случае пользователь больше ничего не вводит. Во втором случае пользователю необходимо ввести пол следующего гостя: 'G' или 'g', если гость – Джентльмен, и 'L' или 'l', если гость – Леди (рис. 3).

```
Input 1 guest (letter 'L' or 'G'): G
Gentleman would like to book a room! He settled into a double room 1! (Thread id_35604)
Input 2 guest (letter 'L' or 'G'): L
Lady would like to book a room! She settled into a double room 2! (Thread id_14804)
Input 3 guest (letter 'L' or 'G'): g
Gentleman would like to book a room! He settled into a double room 1! (Thread id_45360)
Input 4 guest (letter 'L' or 'G'): l
Lady would like to book a room! She settled into a double room 2! (Thread id_40720)
Input 5 guest (letter 'L' or 'G'):
```

рис. 3

## 2.4 Формат вывода данных

Несмотря на выбор пользователя при выборе того, как будут приходить гости вывод данных происходит одинаково. После того, как гость пришел в отель возможны два варианта развития событий:

1) **{Gentleman/Lady}** would like to book a room! **{He/She}** settled into a **{single/double}** room **{number}**! (Thread id\_**{Thread\_id}**) – если в отеле есть свободные места для ночлега, то заселяем гостя в номер отеля (рис. 4);

```
Lady would like to book a room! She settled into a double room 15! (Thread id_42540)
Gentleman would like to book a room! He settled into a single room 1! (Thread id_29884)
```

рис. 4

2) **{Gentleman/Lady}** would like to book a room! There are no free rooms. **{Gentleman/Lady}** have to go away and find another place to sleep (Thread id\_**{Thread\_id}**) – если мест для данного пола уже нет, то он отправляется искать другое место для ночлега (рис. 5).

```
Lady would like to book a room! There are no free rooms. Lady have to go away and find another place to sleep (Thread id_22556)
```

рис. 5

Здесь: **{Gentleman/Lady}** и **{He/She}** – выводятся в зависимости от пола пришедшего гостя, **{single/double}** – тип номера (одноместный или двухместный), **{number}** – номер, который заселили гостя, **{Thread\_id}** – идентификатор потока, который выполнил заселение гостя.

После того, как все гости заселены в отель выводится эскиз, на котором демонстрируются номера отеля с проживающими в них гостями и информация о том, что все гости были заселены (рис. 6). Здесь 'G' – Джентльмен, а 'L' – Леди. Также, отель имеет некоторые

декоративные элементы: название – ‘Four Seasons’, кафе на последнем этаже отеля – ‘Cafe’ и ресепшн на первом этаже при входе в отель – ‘Rec’. Эти элементы никак не повлияли на работу программы.

рис. 6

В случае если кто-то из гостей не смог заселиться, вместо “We catered all guests!” будет выведено: “We did not manage to cater {num} visitors...”, где {num} – число гостей, которых не удалось заселить (рис. 7).

```
We did not manage to cater 7 visitors...
```

рис. 7

### 3. Тестирование программы

#### 3.1 Тест № 1

При выборе метода прихода гостей пользователь может ввести только числа 1 или 2. При некорректном вводе программа предупреждает пользователя и просит ввести его цифру заново.

```
Choose the way of generating guests:
1) Generate randomly;
2) Input each guest with the help of console.
Input your choice here: 0
Incorrect input. You should input '1' or '2': -1
Incorrect input. You should input '1' or '2': 3
Incorrect input. You should input '1' or '2': 10
Incorrect input. You should input '1' or '2': 14
Incorrect input. You should input '1' or '2': -2
Incorrect input. You should input '1' or '2': 1000
Incorrect input. You should input '1' or '2': 2
Input 1 guest (letter 'L' or 'G'):
```

#### 3.2 Тест № 2

При некорректном вводе текущего гостя программа предупреждает пользователя о некорректном вводе и просит попробовать еще раз ввести пол гостя ('G' или 'L').

```
Choose the way of generating guests:
1) Generate randomly;
2) Input each guest with the help of console.
Input your choice here: 2
Input 1 guest (letter 'L' or 'G'): -1
Incorrect input. You should input 'G' or 'L' (Gentleman and Lady respectively): 0
Incorrect input. You should input 'G' or 'L' (Gentleman and Lady respectively): e
Incorrect input. You should input 'G' or 'L' (Gentleman and Lady respectively): gentle
Incorrect input. You should input 'G' or 'L' (Gentleman and Lady respectively): lusya
Incorrect input. You should input 'G' or 'L' (Gentleman and Lady respectively): G
Gentleman would like to book a room! He settled into a double room 1! (Thread id_41548)
Input 2 guest (letter 'L' or 'G'): L
Lady would like to book a room! She settled into a double room 2! (Thread id_7068)
Input 3 guest (letter 'L' or 'G'): g
Gentleman would like to book a room! He settled into a double room 1! (Thread id_40144)
Input 4 guest (letter 'L' or 'G'): l
Lady would like to book a room! She settled into a double room 2! (Thread id_35164)
Input 5 guest (letter 'L' or 'G'):
```

#### 3.3 Тест № 3

Работа программы при корректных данных. В данном тесте рассматривается случай, когда приходящие гости генерируются случайно программой.

```
